ABSTRACT: Cancer is a disease that includes abnormal cell division in an uncontrolled manner which further leads to destruction of body tissues. Cancer is classified by the type of cell and may vary by carcinoma, sarcoma, and lymphoma. Approximately, 8.2 million people are killed every single year due to cancer. The main causes that cause cancer are obesity, poor diet, intake of alcohol and tobacco etc. There may be symptoms that include abnormal bumps, fever, night sweats or in some cases leads to weight loss and change in bowel movements. Natural drugs that treat cancer are *Vinca rosea*, Ginseng, Turmeric, Dandelion. These plants act as anti-cancer agents and helps prevent the cancer in patients. © 2019 iGlobal Research and Publishing Foundation. All rights reserved.
